

AAI PHARMA ASEPTIC RENOVATION

44,800 SqFt OCCUPIED PHARMA RENOVATION
Completed December 2005
Charleston, SC

ASEPTIC AREA RENOVATION

This project consisted of renovations to the client's GMP pharmaceutical manufacturing facility. The clean rooms were renovated and reconfigured to allow better product control and new operations to commence. It involved extensive modifications to HVAC, wall and flooring systems, compressed air and nitrogen process piping as well as the addition of new Kurtzon clean room light fixtures and a fan powered HEPA installation.

At completion, the clean rooms had to be rebalanced and revalidated to meet industry standards. The Project also required new air handlers, in line cooling coils and associated electrical modifications.

Because of workflow adjustment, the door interlock and life safety systems needed to be altered to accommodate our client's needs.
