

JACOBSSEN TEXTRON

3,200 SqFt LOBBY RENOVATION
Completed December 2005
Charlotte, NC

JACOBSSEN TEXTRON

This project required complete demolition and remodeling of the existing lobby and display areas. Interior finishes included new chair rail, cabinetry, ceramic tile and lighting. The lobby led into the main equipment display area which served as the showpiece for the client's new equipment. The display area included astro-turf to simulate grass as well as new painting of the surrounding areas. Since offices at each end of the space were occupied during construction, temporary protection walls were constructed to accommodate the client's ongoing business needs. The storefront entry to the new astro-turf display required cutting into the existing block wall which had to be shored during demo with a permanent lintel installed.
