

LEARNING LINKS ACADEMY

5,300 SqFt NEW CONSTRUCTION
Completed August 2007
Charlotte, NC

LEARNING LINKS ACADEMY

This 5,300 square foot facility was a stick-built wooden framed building with a standard architectural asphalt fiberglass shingled roof system. The project included two by six load bearing sheer walls which housed aluminum storefront windows with one inch insulated tinted glazing, a synthetic plaster and brick veneer exterior with pre-finished metal fascia built on slab on grade construction.

The interior finishes of the structure included custom carpet, linoleum, rubber and vinyl composite flooring with custom-made plastic laminated casework. The project took nine months to complete.
