

# HORTICULTURAL CENTER

**3,000 SqFt NEW CONSTRUCTION**  
**Completed August 2005**  
Charlotte, NC

## MALLARD CREEK HORTICULTURAL CENTER

The project consisted of seven acres of site work and two 1,600 square foot wooden buildings designed to service the Mecklenburg County Parks and Recreation Department's new operating facilities. The first building was primarily for office and administration functions. The second building's primary use was for maintenance and equipment. The facilities were designed to resemble the classic architecture of years gone by with single sloped roofs and bright, vibrant colors. The office buildings contained operable windows and exposed exterior wooden canopies with interior work space for the office staff. The workshop area was designed in a style to match the office facility with the functions of an efficient shop area. The project also required a 5,000 square foot concrete structure which was used for the storage of bulk materials. The project was completed in four months.
