

## MERRY OAKS ELEMENTARY

**45,000 SqFt** DEMOLITION/RENOVATION  
Completed January 2004  
Charlotte, NC

### MERRY OAKS ELEMENTARY

The project included the complete decommissioning and demolition of the old school which was built in the early 1950's, while salvaging one wing and tying it into the new school building's automated systems. This building was on the same grounds as the new school, and work was to progress in a manner that would not hamper the school schedule in session. This required logistical scheduling of construction equipment and trucks into and out of the school zone safely. It also required tying into the existing utilities without disrupting the existing service. We installed new parking lots and new entry toad tie in and constructed handicap-accessible playground areas in front of the School.
