

## The PIAZZA at BELLASERA

**25,000 SqFt NEW CONSTRUCTION**  
**Completed January 2008**  
Matthews, NC

### PIAZZA AT BELLASERA

This project was a two story retail/office building designed for a variety of spaces and uses. The shell building construction consisted of structural steel, brick veneer, EFIS and was clad with a manufactured stacked stone. It also included a pre-finished metal roof system, dark bronze anodized aluminum storefront as well as custom fabric awnings. The multi-colored EFIS surrounded the brick and also flanked the roof line. Custom exterior lighting was added to accent the multi-faceted exterior skin. The second floor was adorned with Corinthian columns and rustic metal railings. The project was completed in four months from ground breaking.
