

SHOWMARS RESTAURANTS

Showmars
Casual Dining...Fast!

4,100 SqFt NEW CONSTRUCTION
Completed December 2005
Lancaster, SC

SHOWMARS LANCASTER

This was HCI's third venture to date with Showmars Restaurant group. The project was a ground-up steel and masonry structure with extensive site work, paving and landscaping. It is slab on grade construction with custom brick and steel accent bands on the exterior of the facade. We participated in the planning and design process with the owner and architect to create this prototype store which will be used as the model for future construction of their expanding chain of restaurants. The interior of the restaurant provides compartment dining areas with large exposed ceilings, marmoleum laminate treatments and polycarbonate shades on southern and northern exposed steel overhangs. Modularized layout of serving and eating areas allow for future expansion of customer pick-up and take out areas as the client's business expands.
